

MINIATURE HORSES

Joanne Johnson, Great Falls, Montana, purchased the Merlin Mini Hoof Trimming Set and is pictured here trimming and shaping the hoof on one of her 6 miniature horses.

"I don't have to worry about the nippers hitting their belly or the rasp. It just takes one tool this way and I'm done. The minis don't get bored as it doesn't take as long to do them."

"Using the Merlin has cut my trimming time by at least half. What has taken me at least an hour in the past is now down to about 20 minutes."

Joanne Johnson
Great Falls, Montana

The Merlin Mini Hoof Trimming Set (#10095) has two accessories that can be used to trim the hoof of the miniature horse. A garnet colored tungsten carbide disc that removes the hoof material by abrasion or the patented 4-tooth hoof trimming chain saw disc that's so precise it'll remove hoof material in slivers as thin as an egg shell.

"I think that either disc works fine, although I like the 4-tooth chain saw blade myself. Either way, it's faster than the old way. With the Merlin you aren't straining as hard to do their feet. Especially now that their feet are getting harder with the dryer weather."

Joanne was so taken by the product that she decided to sell King Arthur's Tools to the horse and mini-horse enthusiasts in her area. Call her today.
